DC Definition

DC means **Delivery Challan**.

A Digital DC is an automatically generated document containing the delivery and pickup information entered by the driver in the Pushpak app.

The Digital DC acts as proof of delivery.

The Digital DC maintains transparency between the driver, packer, hotel, and company.

The Digital DC records:

- Delivered quantities
- Return Fresh quantities
- Pickup quantities
- Heavy Soil quantities
- Damaged quantities

The driver does not manually type the Digital DC.

Current DC Process

Pushpak currently uses **Digital DC**.

Current process:

1. Driver enters delivery quantities.
2. Driver enters Return Fresh quantities when applicable.
3. Driver enters pickup quantities.
4. Driver enters Heavy Soil and Damaged quantities when applicable.
5. Driver enters Remarks.
6. Driver taps Save and Continue.
7. If delivery is short, driver selects a Shortage Reason.
8. Driver taps Generate DC.
9. Pushpak automatically generates the Digital DC from the entered quantities.
10. Driver reviews the DC.
11. Hotel authenticates the DC using OTP.
12. Successful OTP authentication marks the delivery as accepted.

Old DC Process

The old process used a physical paper challan.

Old process:

1. Driver writes the challan by hand on physical paper.
2. Driver photographs the paper challan using the app camera.
3. Driver uploads the photograph.
4. App automatically detects quantities from the photograph using OCR.

Problems with the old process:

- Handwriting could be unclear.
- OCR could misread quantities.
- Driver had to write the challan.
- Driver had to photograph the challan.
- Driver had to upload the photograph.
- Paper could be lost, damaged, or smudged.
- Detection errors could require correction.

The Digital DC removes the paper and OCR steps.

DC Generation

DC generation is the final step of the hotel visit before hotel authentication.

The driver cannot generate the DC until the required delivery and pickup information is complete.

If the delivery quantity is short, the driver must select a Shortage Reason before generating the DC.

DC generation flow:

Delivery entries → Pickup entries → Save and Continue → Shortage Reason if applicable → Generate DC → Review DC → OTP Authentication.

DC Auto-Fill

The Digital DC automatically uses information already entered in the Pushpak app.

The driver does not manually enter quantities into the DC.

The Digital DC can contain:

- Delivered quantity
- Return Fresh quantity
- Pickup quantity
- Heavy Soil quantity
- Damaged quantity

Example:

If the driver enters:

- Delivery = 500 bath towels
- Return Fresh = 20 bath towels
- Pickup = 480 bath towels
- Heavy Soil = 5 bath towels
- Damaged = 3 bath towels

The Digital DC automatically contains those quantities.

Generate DC Steps

1. Complete delivery entries.
2. Complete Return Fresh entries if applicable.

3. Complete pickup entries.
4. Complete Heavy Soil and Damaged entries if applicable.
5. Enter Remarks.
6. Tap Save and Continue.
7. Select Shortage Reason if delivery quantity is short.
8. Tap Generate DC.
9. Review the automatically generated Digital DC.

OTP Authentication

After the Digital DC is generated, the driver must authenticate it with the hotel using OTP.

OTP authentication steps:

1. Review the Digital DC.
2. Tap Authenticate DC.
3. A list of authorized hotel contacts appears.
4. Select the hotel person who will authenticate the DC.
5. Tap Send OTP.
6. The selected hotel person receives the OTP on their registered phone number.
7. Ask the hotel person for the OTP.
8. Enter the OTP in Pushpak.
9. DC authentication succeeds.
10. Delivery is marked successful.

The OTP is sent to the selected hotel person, not to the driver.

Selecting Hotel Contact

The driver can select another person from the authorized hotel contact list if the initially intended hotel person is unavailable.

The driver does not have to use only one specific hotel person if another authorized person is available in the list.

OTP Failure

If the driver enters the wrong OTP, the driver can try again.

If OTP authentication repeatedly fails, the driver should contact the team.

If the hotel person refuses to provide the OTP, the driver should contact the team.

OTP After DC Regeneration

If the driver changes quantities after generating the DC but before OTP authentication:

1. Edit the incorrect quantity.
2. Generate the DC again.
3. A new DC is created.
4. Authenticate the new DC.
5. Send a new OTP.
6. Enter the new OTP.

A regenerated DC requires a new OTP.

The previous OTP cannot be used for the regenerated DC.

Editing Before DC Generation

If the driver notices an incorrect quantity before generating the DC, the driver can edit the quantity.

The driver should correct the quantity before generating the DC.

Editing After DC Generation

If the driver notices an incorrect quantity after generating the DC but before OTP authentication, the driver can edit the quantity and regenerate the DC.

The regenerated DC must be authenticated again.

A new OTP is required for the regenerated DC.

Editing After OTP Authentication

Once the DC has been successfully authenticated using OTP, the DC cannot be changed.

The driver must make corrections before successful OTP authentication.

Delivery Accepted

Successful OTP authentication means:

- Hotel has accepted the delivery.
- DC is a verified record.
- Delivery is marked successful.
- Hotel visit is completed.
- The authenticated DC cannot be changed.

Hotel DC Copy

The hotel receives a copy of the Digital DC.

Visit Completion

The driver cannot proceed to the next hotel until the DC has been authenticated.

DC authentication is required to complete the hotel visit.

Short Delivery

If delivered quantity is less than expected quantity:

1. Driver enters the actual delivery quantity.
2. Driver taps Save and Continue.
3. Driver selects the applicable Shortage Reason.
4. Driver generates the Digital DC.
5. The DC contains the entered delivery information.

Remarks

Remarks are part of the hotel visit flow.

The driver enters Remarks before generating the DC.

Important Rules

- DC = Delivery Challan.
- Digital DC is automatically generated from driver-entered quantities.
- Driver does not manually type the DC.
- Old process used a handwritten physical challan and OCR.
- Current process does not require a physical paper challan.
- Current process does not require OCR.
- DC is generated after required delivery and pickup information is entered.
- Shortage Reason is required when delivery quantity is short.
- Hotel authentication is required before completing the visit.
- OTP is sent to the selected authorized hotel person's registered phone number.
- Driver can select another authorized hotel person if the first person is unavailable.
- Wrong OTP can be tried again.
- Repeated OTP failure requires contacting the team.
- Hotel refusal to provide OTP requires contacting the team.
- Editing is possible before OTP authentication.
- Regenerating a DC requires a new OTP.
- Old OTP cannot authenticate a regenerated DC.
- DC cannot be changed after successful OTP authentication.
- Driver cannot proceed to the next hotel until DC authentication is complete.
- Hotel receives a copy of the Digital DC.

FAQ

What is a DC?

DC means Delivery Challan.

What is a Digital DC?

A Digital DC is an automatically generated Delivery Challan created from quantities entered in the Pushpak app.

Do I manually enter the DC?

No. The Digital DC automatically uses the quantities entered in the app.

What was the old DC process?

The driver wrote a physical challan by hand, photographed it, uploaded it, and the app used OCR to detect the quantities.

Do I need paper for the Digital DC?

No. The Digital DC does not require a physical paper challan.

Do I need to scan the challan?

No. The current Digital DC process does not use OCR or paper scanning.

When do I generate the DC?

Generate the DC after completing the required delivery and pickup entries and selecting a Shortage Reason when applicable.

Who receives the OTP?

The selected authorized hotel person receives the OTP on their registered phone number.

Can I select another hotel person?

Yes. If the intended person is unavailable, the driver can select another person from the authorized list.

What if the hotel person refuses to give me the OTP?

Contact the team.

What if I enter the wrong OTP?

You can try again.

What if OTP verification keeps failing?

Contact the team.

What if I enter the wrong quantity before generating the DC?

You can edit the quantity before generating the DC.

What if I enter the wrong quantity after generating the DC?

If OTP authentication has not happened, edit the quantity and regenerate the DC.

Do I need a new OTP after regenerating the DC?

Yes. A regenerated DC requires a new OTP.

Can I use the previous OTP after regenerating the DC?

No.

Can I change the DC after OTP authentication?

No. Once OTP authentication succeeds, the DC cannot be changed.

Can I complete the visit without OTP authentication?

No. The DC must be authenticated before the visit can be completed.

Can I proceed to the next hotel without authenticating the DC?

No.

Does the hotel receive a copy of the DC?

Yes.
