Trip Definition

A **Trip** is a collection of multiple hotels that a driver is assigned to visit along a route.

One Trip can contain multiple hotels.

Each hotel in a Trip can have different:

- Linen types
- Quantities
- Contacts
- Delivery requirements
- Pickup requirements

A Trip is different from a Visit.

Trip = multiple hotels on a route.

Visit = work performed at one hotel.

Visit Definition

A **Visit** is the work performed at one specific hotel during a Trip.

Each hotel in a Trip has its own Visit.

A Visit can include:

- Delivery
- Return Fresh
- Pickup
- Heavy Soil
- Damaged
- Remarks
- Digital DC
- OTP authentication

A Visit starts when the driver starts the visit at the hotel.

Trip vs Visit

Trip	Visit
Contains multiple hotels	Represents one hotel
Covers the complete route	Covers work at one hotel
Started when exiting the warehouse	Started at the hotel
Contains multiple visits	Contains one hotel's delivery/pickup work
Ends after all hotels are completed	Completed after the hotel's required process is completed

---

Viewing Assigned Trips

The driver receives assigned Trips in Pushpak.

Trips are available to the driver **the same morning**.

The driver should open the Pushpak app at the warehouse and refresh the app.

Refreshing the app is **recommended but not mandatory**.

Start Trip

Start Trip marks the beginning of the driver's Trip.

Start Trip can only be started when the driver is **exiting the warehouse**.

The driver cannot start the Trip from another location.

The Start Trip button is disabled when the driver is not at the required warehouse-exit location.

Starting the Trip indicates that the driver has started the route with the assigned load.

Start Trip Rules

- Start Trip is only for the beginning of the Trip.
- Start Trip should be tapped when exiting the warehouse.
- Start Trip cannot be started from another location.
- The Start Trip button is disabled when it cannot be started.

Hotels Inside a Trip

A Trip contains a list of hotels.

Hotels are shown in a suggested visiting order.

The driver is **completely free to choose the visiting order**.

The driver does not have to visit hotels in numerical order.

Example:

Hotel 1 → Hotel 2 → Hotel 3 → Hotel 4

The driver can instead visit:

Hotel 1 → Hotel 3 → Hotel 4 → Hotel 2

The visiting order can be changed based on the driver's route and situation.

Starting a Visit

Start Visit begins the work for a specific hotel.

Start Visit can only be performed when the driver is inside the hotel's required perimeter.

The confirmed hotel perimeter is **2 meters**.

If the driver is outside the hotel perimeter:

- Start Visit is completely blocked.
- The driver cannot start the Visit.

When the driver enters the required perimeter:

- Start Visit becomes available automatically.
- The driver does not need to refresh the app.

Start Visit Flow

1. Driver arrives at the hotel.
2. Driver enters the required hotel perimeter.
3. Start Visit becomes available automatically.
4. Driver opens the hotel.
5. Driver opens the relevant order.
6. Driver taps Start Visit.
7. Hotel visit process begins.

Start Visit Location Rule

The driver must be within the **2-meter hotel perimeter** to start the Visit.

If the driver is outside the perimeter, the app completely blocks Start Visit.

The driver does not need to refresh after entering the perimeter because the availability updates automatically.

Regular Orders

Pushpak currently uses **Regular Orders**.

Regular Orders are scheduled hotel orders.

Regular Orders can be recurring based on the hotel's schedule.

Regular Orders can contain the hotel's delivery and pickup requirements.

The driver selects the relevant Regular Order when starting the hotel Visit.

Ad Hoc Orders

Ad Hoc Orders are currently **not in use in Pushpak**.

The current Pushpak process uses Regular Orders.

Multiple Regular Orders

A hotel can **mostly have multiple Regular Orders** in the same Visit.

The exact behavior for every possible multiple-order scenario is not further specified.

Skipping a Hotel

A driver can skip a hotel in the Trip.

If a hotel is skipped:

- The hotel remains **Pending**.
- The driver can continue with other hotels.
- The skipped hotel remains incomplete.

Pending Hotel

A skipped hotel remains in a **Pending** state.

A Pending hotel has not been completed.

A Pending hotel does not count as a completed Visit.

Hotel Closed or Inaccessible

If the driver reaches a hotel and the hotel is:

- Closed
- Inaccessible
- Otherwise unavailable for the Visit

the driver should **contact the team**.

Network Problems

If there is no network at the hotel, the driver should **contact the team**.

End Trip

Pushpak has an **End Trip** button.

The driver can tap End Trip **only after all hotels in the Trip have been completed**.

The End Trip button cannot be used while there are incomplete hotels.

The driver must complete the required hotel Visits before End Trip becomes available.

Trip Completion

A Trip is considered complete when all hotels in the Trip have been completed.

The driver can then use the **End Trip** button.

The End Trip button cannot be tapped before all hotels are completed.

Pickup and Trip Completion

A Trip can still be completed when a hotel has a pending pickup.

The exact handling of the pending pickup after Trip completion is not further specified.

Trip Reassignment

Trip reassignment is **mostly not allowed**.

The exact exceptions or conditions under which reassignment may be possible are not currently specified.

Trip Assignment

The driver receives assigned Trips.

The exact internal method used to assign Trips is not required for the driver-facing knowledge base.

Morning Routine

Recommended morning routine:

1. Reach the warehouse.
2. Open Pushpak.
3. Refresh the app.
4. View the assigned Trips.
5. Open the required Trip.
6. Review the hotels.
7. Exit the warehouse.
8. Tap Start Trip.

Refreshing is recommended but not mandatory.

Complete Trip Flow

The general Trip flow is:

1. Driver receives the Trip.
2. Driver reaches the warehouse.
3. Driver opens Pushpak.
4. Driver refreshes the app.
5. Driver reviews the assigned Trip.
6. Driver exits the warehouse.
7. Driver taps Start Trip.
8. Driver travels to the assigned hotels.
9. Driver can choose the hotel visiting order.
10. Driver enters the required hotel perimeter.
11. Start Visit becomes available automatically.
12. Driver opens the hotel order.
13. Driver taps Start Visit.
14. Driver completes the hotel Visit.
15. Driver repeats the process for other hotels.
16. Any skipped hotel remains Pending.
17. Once all hotels are completed, End Trip becomes available.
18. Driver taps End Trip.

Important Rules

- A Trip contains multiple hotels.
- A Visit represents one hotel.

- Start Trip is used when exiting the warehouse.
- Start Trip cannot be started from another location.
- Start Trip is disabled when it cannot be started.
- Trips are available to the driver the same morning.
- Refreshing the app at the warehouse is recommended but not mandatory.
- Hotel visiting order is completely flexible.
- Start Visit requires the driver to be within the 2-meter hotel perimeter.
- Start Visit is completely blocked outside the hotel perimeter.
- Start Visit becomes available automatically after entering the perimeter.
- Refreshing is not required after entering the hotel perimeter.
- Regular Orders are currently used.
- Ad Hoc Orders are currently not in use.
- A driver can skip a hotel.
- A skipped hotel remains Pending.
- If a hotel is closed or inaccessible, contact the team.
- If there is no network at the hotel, contact the team.
- End Trip exists.
- End Trip can only be tapped after all hotels are completed.
- A Trip cannot be ended while hotels remain incomplete.
- A Trip can be completed even if a pickup is pending.
- Trip reassignment is mostly not allowed.

FAQ

What is a Trip?

A Trip is a collection of multiple hotels assigned to a driver along a route.

What is a Visit?

A Visit is the work performed at one specific hotel during a Trip.

What is the difference between a Trip and a Visit?
